

# Preparation in Windows

# How to Connect to The Workstation

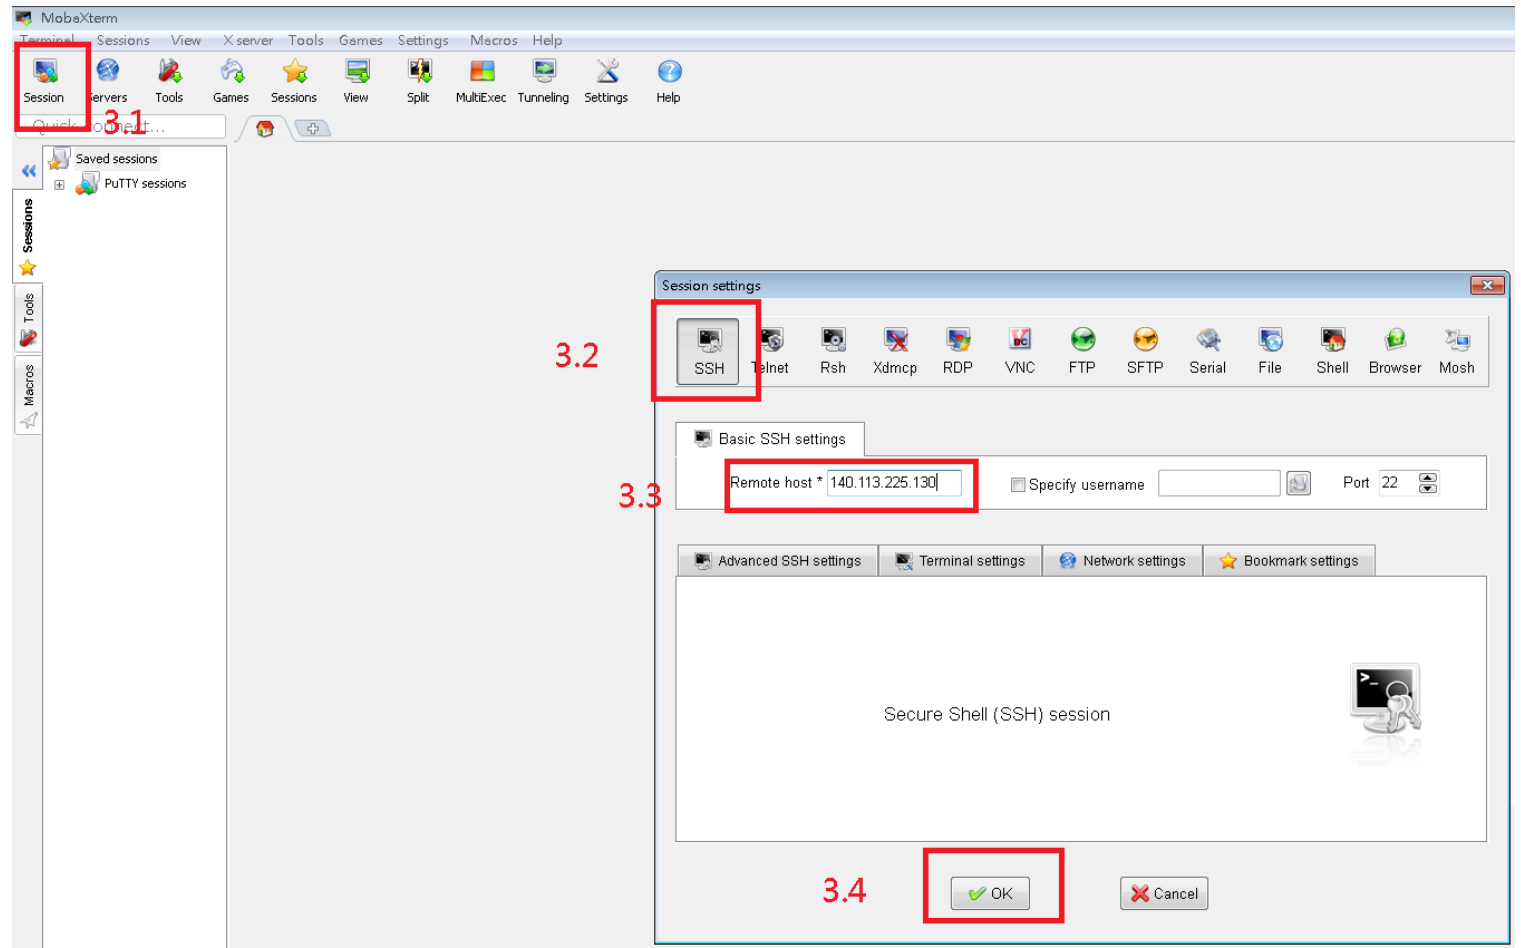

- 1. Download “mobaXterm”

<http://mobaxterm.mobatek.net/download-home-edition.html>

# How to Connect to The Workstation

- 2. Open “MobaXterm\_Personal\_8.4”
- 3. Set configuration
  - Click session
  - Click SSH
  - Remote host
  - Click OK
- 4. Login

# How to Connect to The Workstation

- 5. Get the package to your account by the command:  
\$tar -xvf /tmp/Lab01.tar
- 6. Use the command “ls” to check the files
- 7. Use the command “cd” to change the directory

```
Welcome to Ubuntu 14.04.1 LTS (GNU/Linux 3.13.0-32-generic x86_64)

* Documentation:  https://help.ubuntu.com/

545 packages can be updated.
252 updates are security updates.

ca30@ed520-BA5190-A500:~$ tar -xvf /tmp/Lab01.tar
./Lab01/
./Lab01/MM/
./Lab01/MM/00_Report/
./Lab01/MM/mm.cl
./Lab01/MM/mm
./Lab01/MM/parameter.h
./Lab01/MM/09_CLEAN_REPORT.sh
./Lab01/MM/00_Configuration/
./Lab01/MM/00_Configuration/cpu-config.ini
./Lab01/MM/00_Configuration/mem-config.ini
./Lab01/MM/00_Configuration/gpu-config.ini
./Lab01/MM/04_RUN_ON_M2S.sh
./Lab01/MM/mm.c
./Lab01/MM/03_COMPILE_ON_M2S.sh
./Lab01/MM/01_COMPILE_ON_NATIVE.sh
./Lab01/MM/README.txt
./Lab01/EXAMPLE/
./Lab01/EXAMPLE/vector_add
./Lab01/EXAMPLE/vector_add.c
./Lab01/EXAMPLE/vector_add.cl
./Lab01/EXAMPLE/Makefile
ca30@ed520-BA5190-A500:~$ ls
Lab01
ca30@ed520-BA5190-A500:~$ cd Lab01/MM/
ca30@ed520-BA5190-A500:~/Lab01/MM$
```

# How to Connect to The Workstation

- 8. Use “vim” to open the text file:  
\$vim mm.c
- 9. Then, you could write your code

```
ca30@ed520-BA5190-A500:~$ ls
Lab01
ca30@ed520-BA5190-A500:~$ cd Lab01/MM/
ca30@ed520-BA5190-A500:~/Lab01/MM$ vim mm.c
mm.c  mm.cl
ca30@ed520-BA5190-A500:~/Lab01/MM$ vim mm.c
```

8

```
1 #include <stdio.h>
2 #include <stdlib.h>
3 #include <string.h>
4 #include <math.h>
5 #include <time.h>
6 #include <CL/cl.h>
7
8 #include "parameter.h"
9
10
11
12 // ----- Function for OpenCL structure
13
14 // Create a device structure
15 cl_device_id create_device() {
16
17     cl_platform_id platform;
18     cl_device_id dev;
19     int err;
20
21     // Identify a platform
22     err = clGetPlatformIDs(1, &platform, NULL);
23     if(err < 0) {
24         printf("Couldn't identify a platform: %d\n", err);
25         exit(1);
26     }
27
28     // Access a device
29     err = clGetDeviceIDs(platform, CL_DEVICE_TYPE_GPU, 1, &dev, NULL);
30     if(err == CL_DEVICE_NOT_FOUND) {
31         err = clGetDeviceIDs(platform, CL_DEVICE_TYPE_CPU, 1, &dev, NULL);
32     }
33     if(err < 0) {
34         printf("Couldn't access any devices: %d\n", err);
35         exit(1);
36     }
37
38     return dev;
39 }
40
```

# How to Use “vim”

- After you open the file the following hot keys you will need:
  - “i” to enter the edit mode, esc for exit.
  - “:wq” to save and exit the file.
  - “q!” to exit the file forced.
  - More detailed in google.

# How to Run Your Code

- For Native:
  - Compile your code  
`$/01_COMPILE_ON_NATIVE.sh`
  - Run  
`$/mm`

# How to Run Your Code

- For Multi2sim:
  - Compile your code  
`$/03_COMPILE_ON_M2S.sh`
  - Run  
`$ ./04_RUN_ON_M2S.sh`

# Another Editor: Notepad++

(If you don't like to use the editor "vim" in the workstation, it's much easier for Windows users)

# Another Editor: Notepad++

- 1. Download in official website  
<https://notepad-plus-plus.org/>
- 2. Install

### 3. Connect to the workstation in Notepad++

- Enable NppFTP window

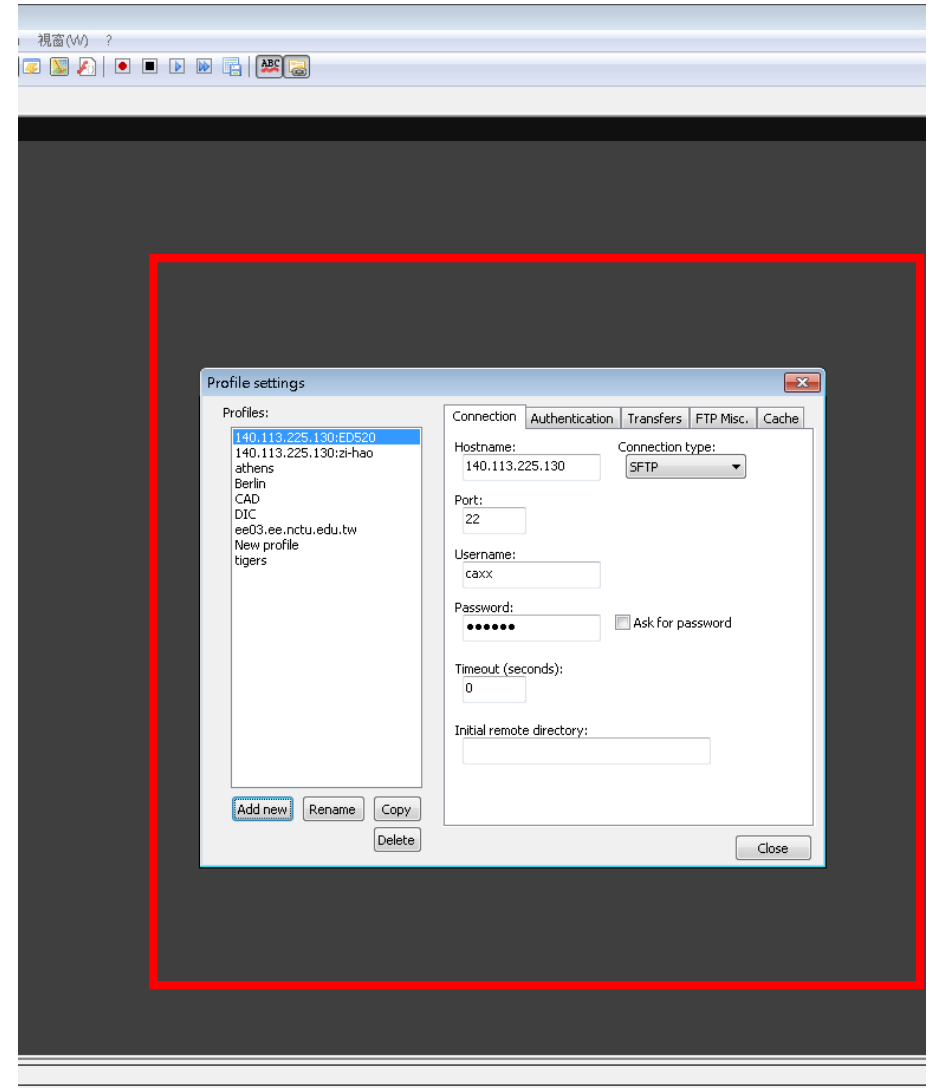

## 4. Connect to the workstation in Notepad++

- Click Profile settings

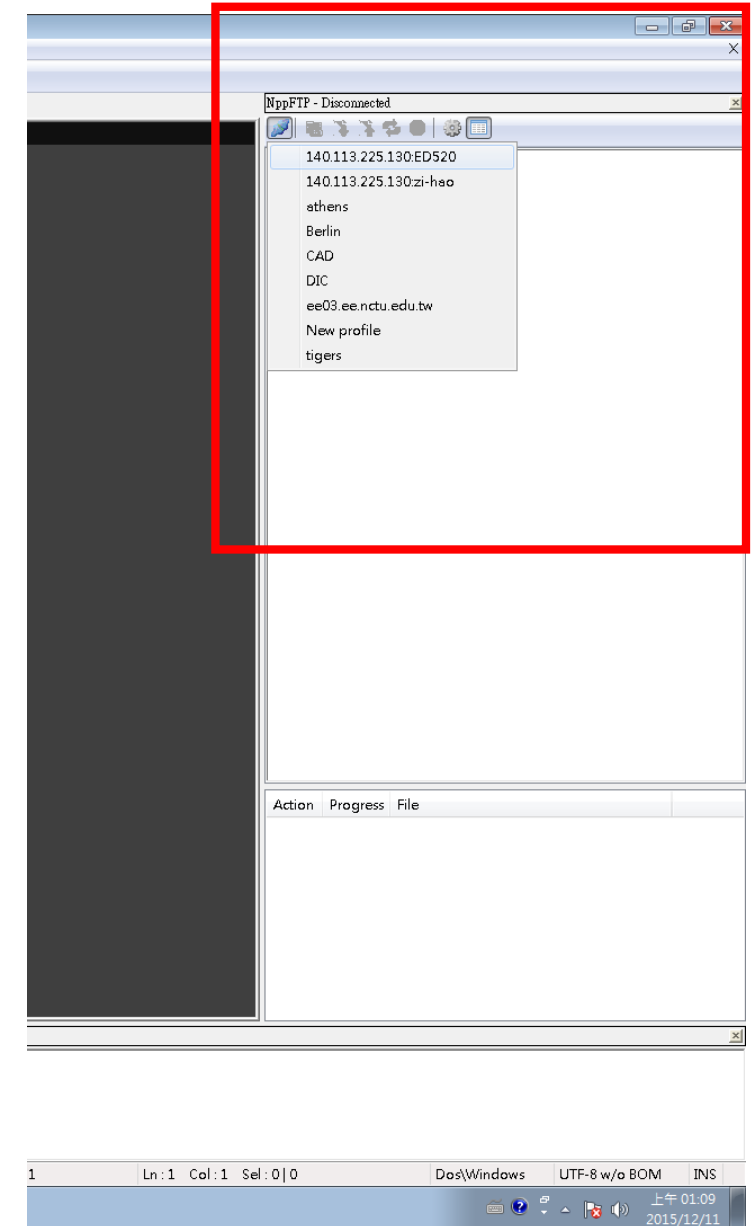

# 5. Setting

- Click “Add new”
- Set host name: 140.113.225.130
- Connection type: SFTP
- Port: 22
- Username: ca01 ~ ca33
- Password: ca2015(default)
- Click close

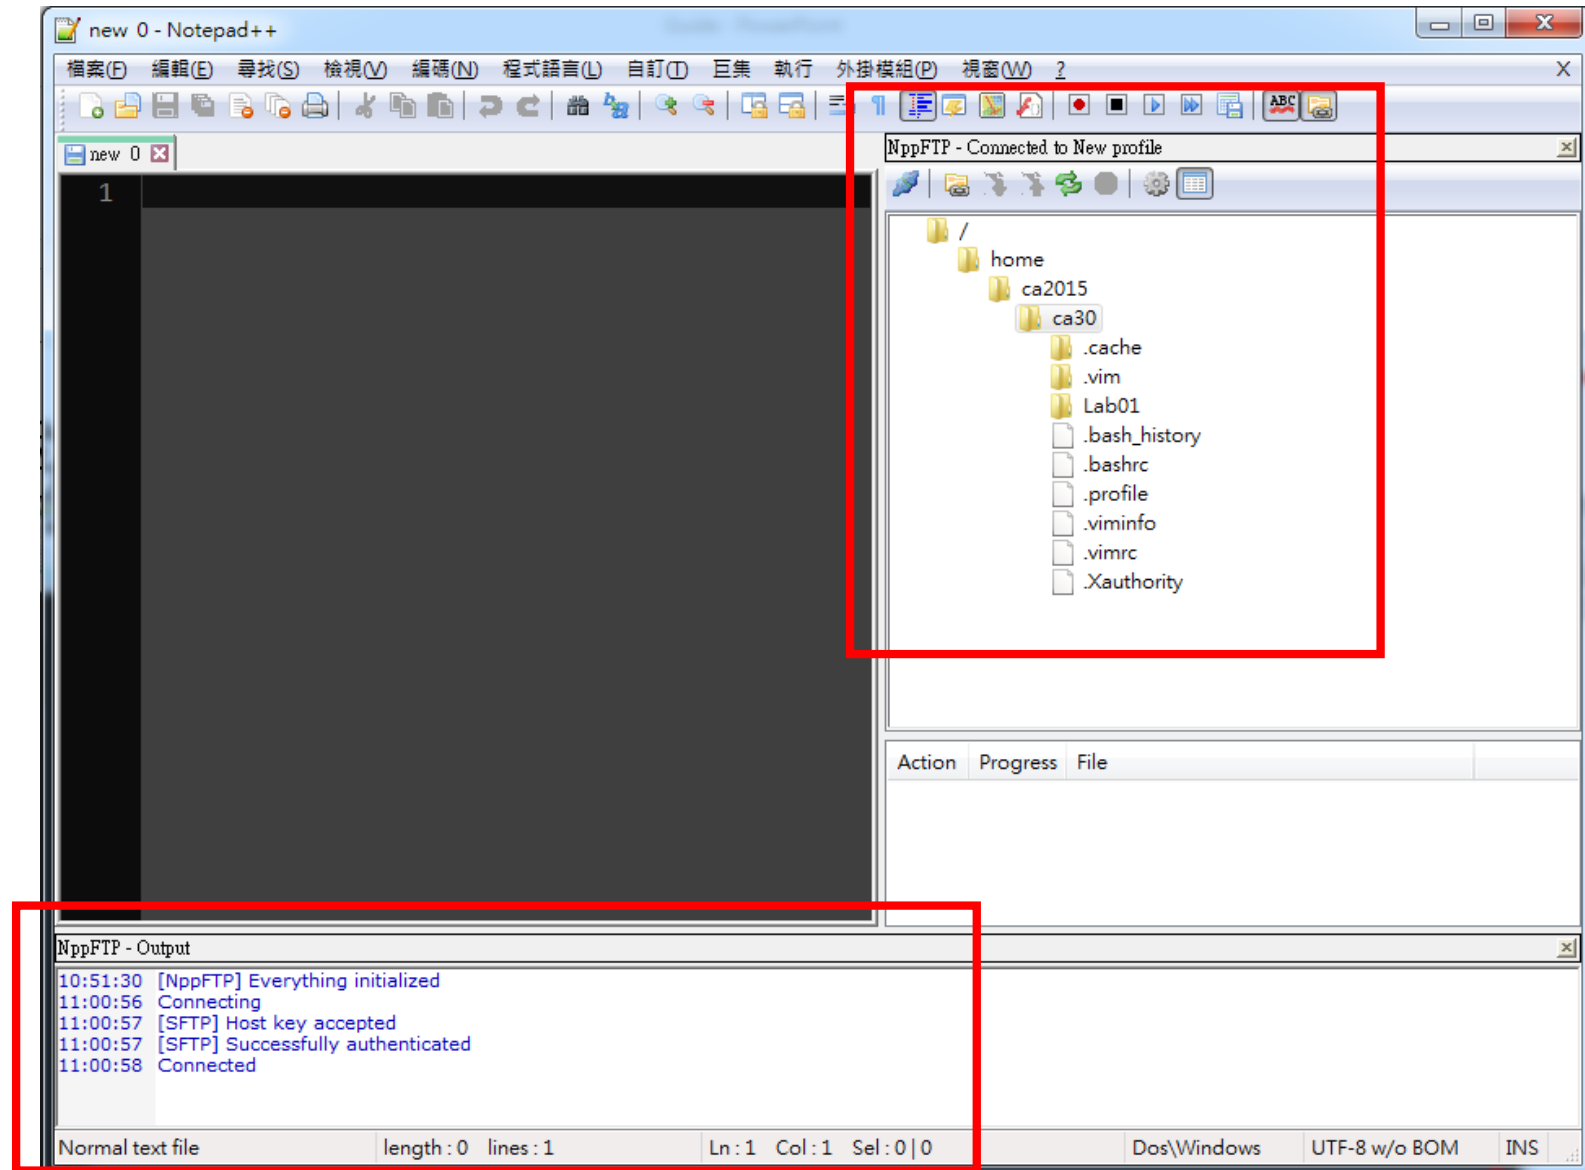

## 6. Connect

- Choose the workstation

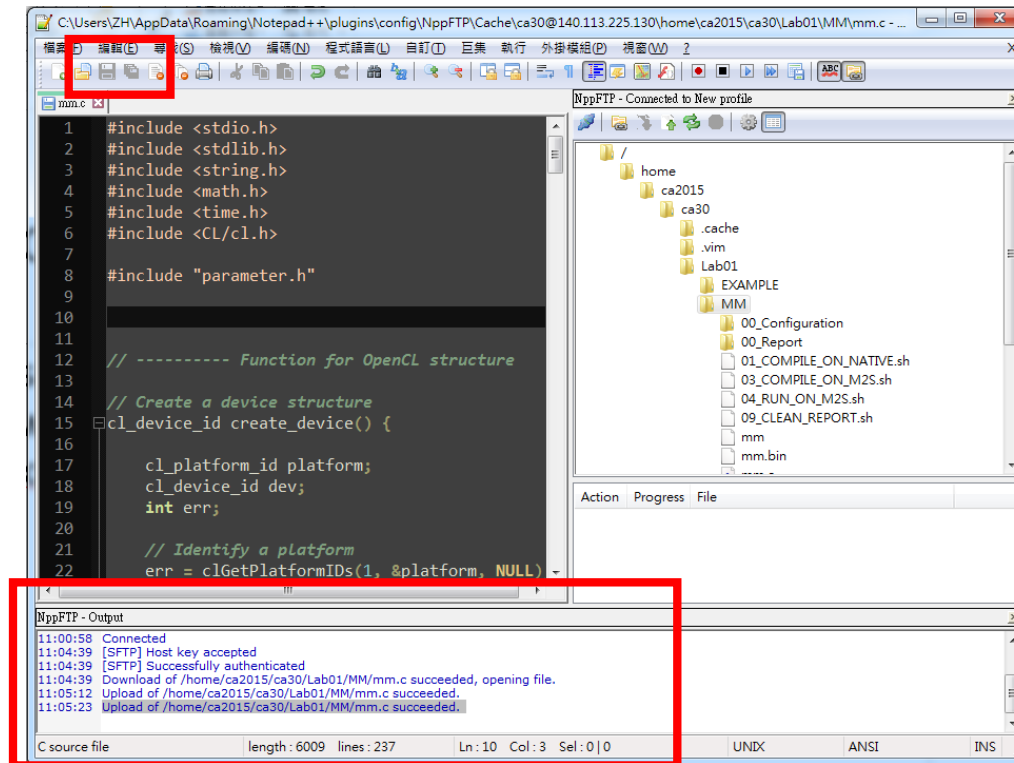

# 7. Success

## 8. Write your code

- Don't forget to click "save" and check the state of the file. If it is successful, the window will show "Upload of xxxxxxxxxxxxxxxxxxxx succeeded."

# Notice

- You **STILL** must run your code in the Workstation!!
- Notepad++ is just for edit and writing your code.
